

GOAT REGISTRATION PROCEDURES

1. The Registry will track purebreds only.
2. Goats are not recognized as Registered Arapawas without proper ear tattoo identification. Tattoo identification will follow the American Dairy Goat Assoc. practice: The “herd prefix”, two to four letters identifying the place of birth for the right ear of the goat, and a letter for the year of birth and the number of the animal born to the owner that year in the left ear of the goat. “L” represents 2019; “M” for 2020, etc. (Example – “CP” in the right ear; “L2” in the left ear of the second registered goat born last year at Conner Prairie.)
3. Applications for registration should be applied for when the goat is between 3 and 6 months of age. The Application Form may be uploaded online, mailed, e-mailed to the Registrar.
4. Animals that are culled or neutered need not be registered.
5. Upon receipt of the Application, the Registrar will issue a Registration Certificate bearing an appropriate seal and enter the action in the Breed Registry.
6. It is required to have on file photos of the animal to back up the tattoo ID to be registered. A left side and right side photo at approximately 6 month of age is best.
